- Hype? (if time permits)

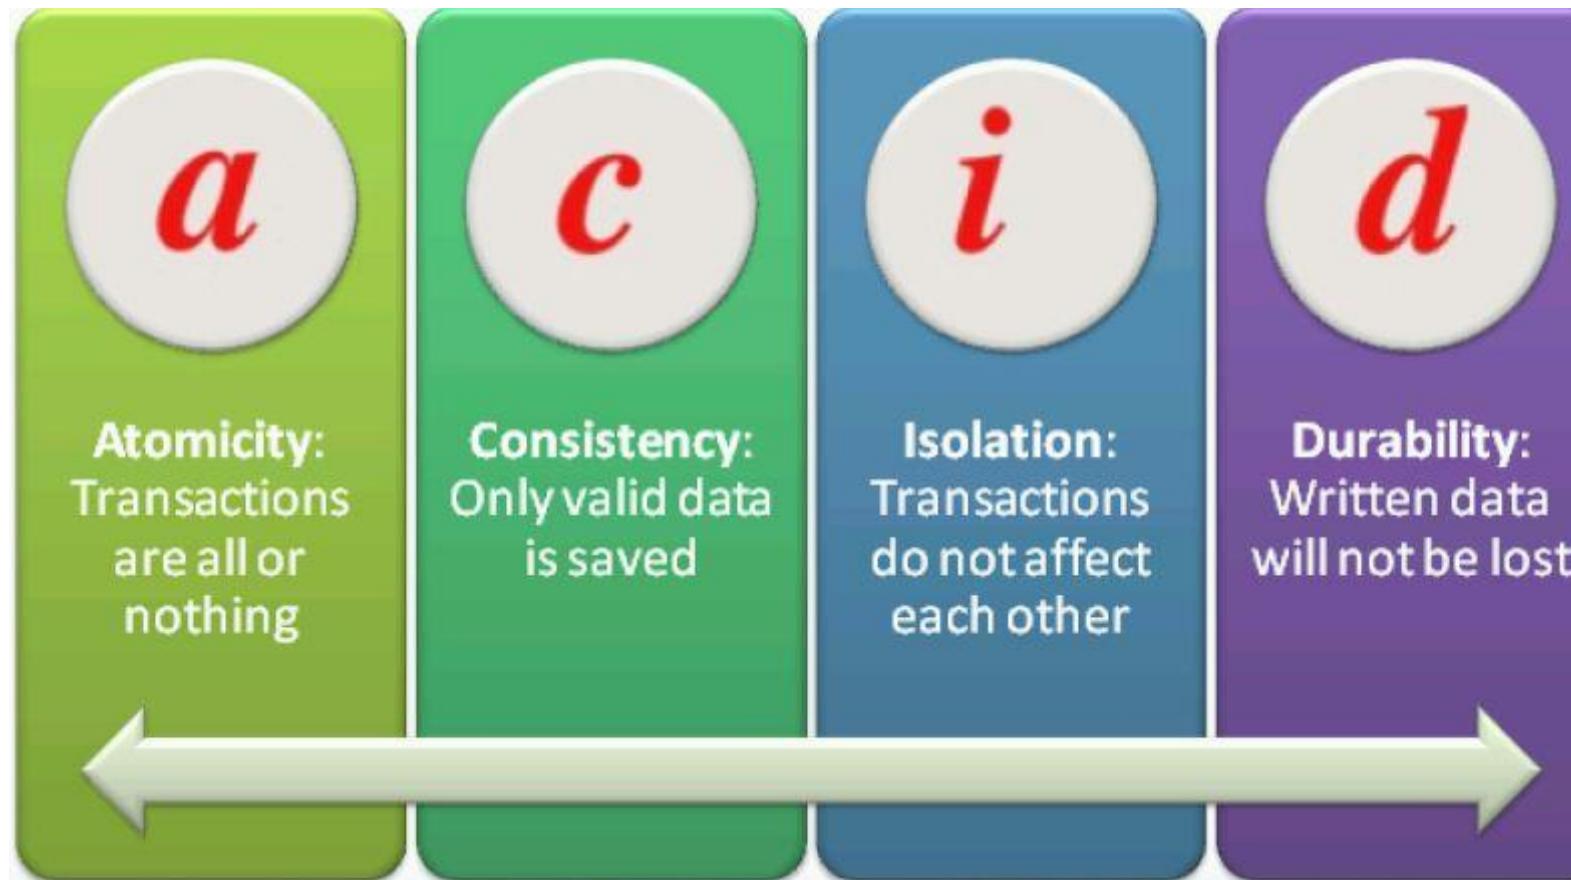

Not
Only SQL

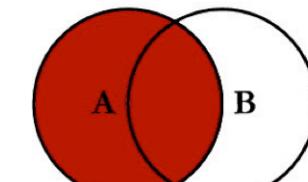

NoSQL - driving forces

1. *Scaling out*: partitioning
2. *Performance*: remove complexity, simplify assumptions
3. *Impedance mismatch*: from relational data structures to programming language constructs

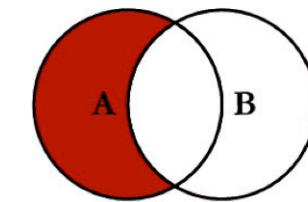

Partitioning for RDBMS?

Performance: The cost of not being on time

“... because even the slightest outage has significant financial consequences and impacts customer trust.”

“... an extra tenth of a second response time will cost 1% in sales.”

“... half a second time increase in latency caused traffic to drop by a fifth.”

Gently Flexing the Grid

A Story about George

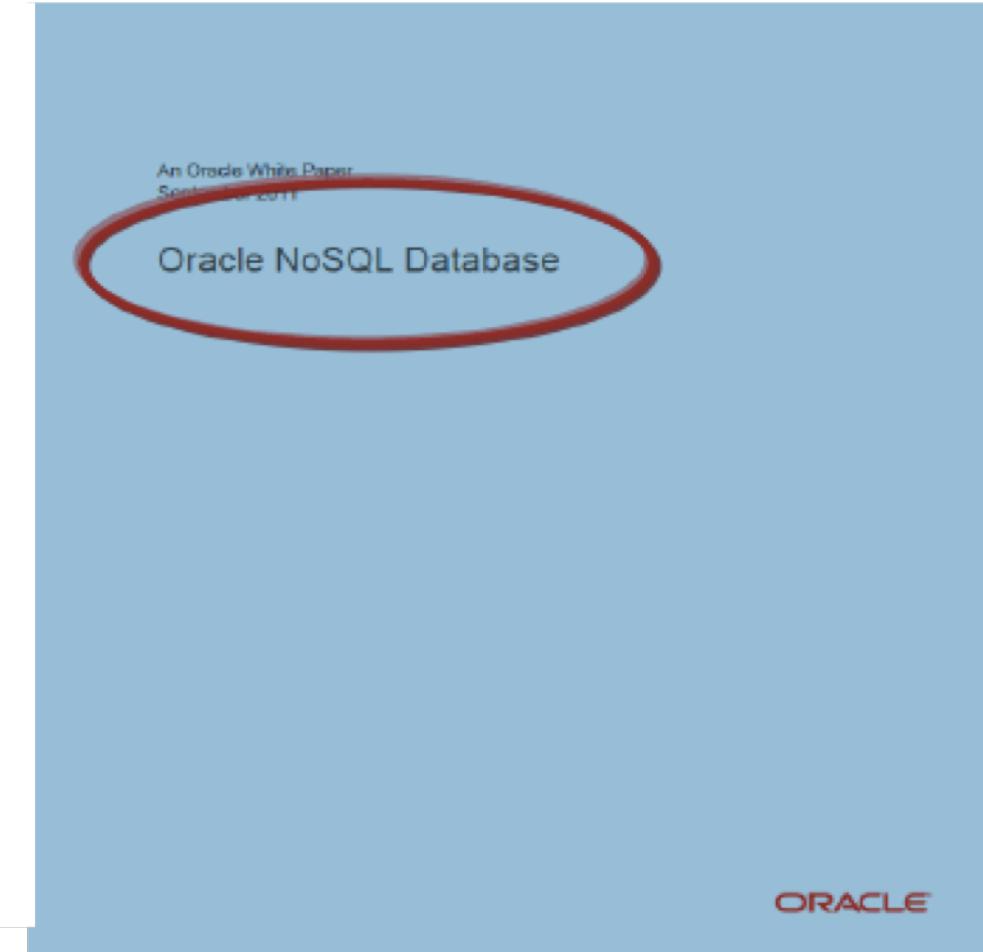

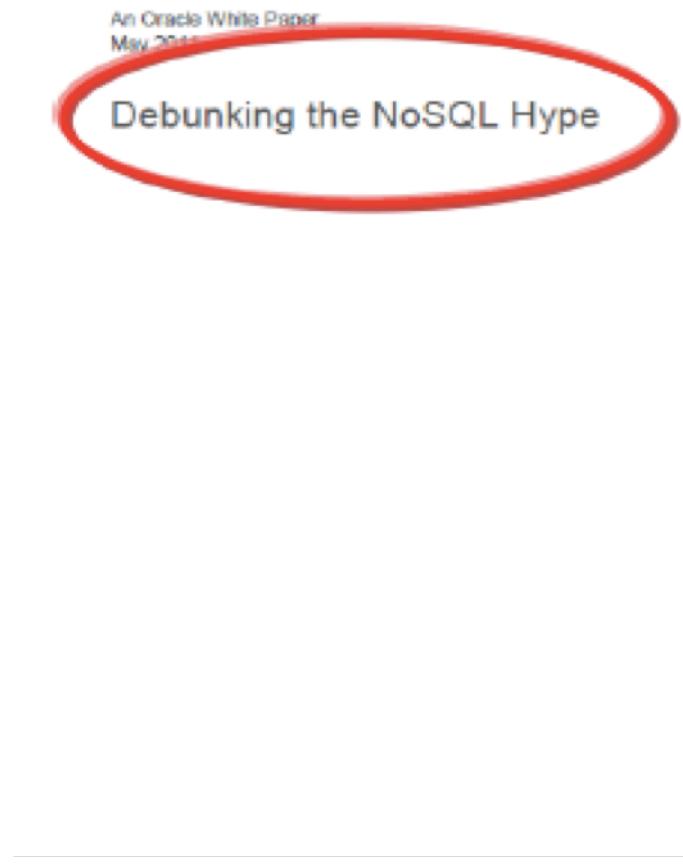

Once upon a time, in a land of metaphor, there lived a database called George. George was one of the most prominent databases the land had ever seen. In fact George was more than a database, George was a data craftsman. He had been responsible for the care and welfare of data for as long as data had existed in the little land, and the application developers loved him for his meticulous stewardship of most precious commodity. Life was good.
